Fastrac™ Short Cycle Program

Low and medium voltage equipment in a hurry

imagination at work

In a hurry?

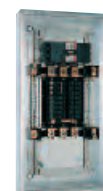

Sometimes, you need to replace equipment now! Sometimes, you need to make up for lost time. Sometimes, the unexpected happens.

For whatever reason, when you need it in a hurry, the Fastrac™ Short Cycle Program from GE is there for you. Fast quotes. Fast action. Fast delivery – in as little as 24 hours.

Fastrac covers:

- switchboards
- panelboards
- motor control centers
- load interrupter switches
- switchgear
- controls
- busway
- transformers
- components

To add more flexibility, Fastrac is tiered. In addition to normal cycle, there are mid, short and HOT cycles – so you can choose the best match for your schedule and budget.

How does it happen?

It's not by chance that GE delivers the goods so fast. Short cycle assembly centers build what you need and ship it fast. They're located across the country to reduce transit time. And they're supported by dedicated commercial support teams that work with you to answer questions on products, shipping cycles and more.

How fast?

Product		Cycle
