

# GE Panel Pros

GE control panel experts – working for you!

GE Panel Pros form a team dedicated to creating the control panels that OEMs and others need for their specific applications. Drawing on decades of experience, these engineers, designers and craftsmen work *with you and for you* to deliver high quality, fully compliant panels in a timely, cost-effective manner.

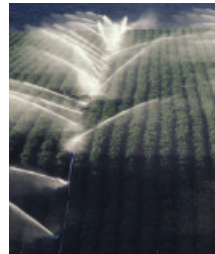

For all your control panel needs, turn to the GE Panel Pros.

# GE Panel Pros

GE control panel experts – working for you!

## Scope

We build control (and other) panels for OEMs (and others) that cover a host of needs.

Yours may include:

- control components such as contactors, overloads, drives, soft starters, transformers, disconnects, pilot devices, etc.
- motor starters in NEMA sizes 0-5 – FVNR, FVR, RV, soft start and drives
- enclosures of NEMA Types 1, 12, 3R or 4X

## Applications

There's really no limit to the applications for our panels. Proven possibilities include water treatment, healthcare, fan and pump, lighting control and pump panels.

## Process

You provide a schematic or wiring diagram detailing your application's requirements – or a sample panel that we can reverse engineer. With that and a list of components, GE Panel Pros will make suggestions on how we might improve the design. Once that's been finalized, GE will submit a proposal and, on approval, begin production. A dedicated team ensures both quality and timeliness, and the panels are fully tested to your specification before delivery.

## Compliance

All panels can be designed to meet UL and CSA requirements as specified.

**To learn more about how you can put GE Panel Pros to work for you, talk to your GE Account Manager.**
